Subject: Letter of Recommendation – DT-TT Festival 2025

Dear Organizing Committee,

S.C. Biotem I.E. Srl appreciates the two factors, digital transformation and artificial intelligence as significant factors in shaping and changing daily, industrial or medical life.

This is the reason why we are interested in supporting the Technology Transfer Festival, "Digital transformation of production and products, based on technology transfer (DT-TT)", which will take place in Braşov in 2025. Of course, we are open to this collaboration and opportunity offered by DT-TT Festival and we offer our support and active participation in this program. It gives us the framework for exchanges of opinions of experts in the field of new technologies, embedded applications and artificial intelligence implemented mainly in industry and medicine.

It is important to mention that active participation in this action is appropriate for:

- the exchange of information regarding new technologies and practical approaches regarding digital implementation
- it will help us to adjust the managerial and research-design prioritization in our field of interest in the near future
- re-engineering based on principles and methods that offer a much higher yield
- offers the possibility of establishing scientific and technological communities in our fields of interest, mentioned above

Therefore, our company unconditionally supports this initiative of the Center of Valorization and Transfer of Competencies and Transilvania University in Brasov and we are convinced of its usefulness in the process of accelerating and implementing digitization with all the positive results.

We are waiting for this event with interest and impatience and we wish not to get heavily involved in its development and success.

Sincerely,

Date 2024. September 16

Nicolae Marius Roman

Manager S.C. Biotem I.E. Srl

Prof. UTCN President SNIMTB
